Smart Automation and Hydropneumatics Pvt. Ltd.

SAHPL

SAHPL is our manufacturing Units, we provides Design, Manufacturing, Installation, Commissioning services for Industrial Automation, Special Purpose Machines, industrial chillers , Cold Rooms, Material Handling Equipment and Control Panel.

- Every product designed by qualified engineers and execution of the same has done by skilled workers.
- Has been in the industry from last 8 years, we are familiar with GMP procedures for the equipment's, we are specialized in.
- We always focus on the offering the quality Production & appropriate pricing.

HOT MELT GLUE MACHINE - FOOD CARTONS

Client - General Mills and Valco Melton

Description -

Box Packaging Conveyor offers you to fold and pack the box with glue with very little help from human being. It's totally automated system, where we just want to put the box at proper timing in the start tray.
Rest of the work (folding and gluing) is done automatically and we get the fully packaged box at other side of the system.
Also it can be adjusted according to sizes of the box we are packaging. Adjustments are given to set the system according to box size.
PLC helps you to set the speed of packaging, start up and end up timing for glue gun.

Roller Based Conveyor

Client - Cummins Generator Technologies and Mahindra Vehicle Manufacturers Ltd

File Conveyor

Client - Navneet Industries

Total length of conveyor is 15m
Belt conveyor is used to easy and swift flow of files.

There are two main stages of this conveyor
1] Feeder 2] Glue dropper machine

Feeder: Feeder move up and down to allow only one file to proceed onto the conveyor.

Glue dropper machine: This machine drops the glue on specific position with the help of sensor.

Feeder

Belt Conveyor

Glue dispensing machine

Chain Tilter

Client - Cummins Generator Technologies and Mahindra Vehicle Manufacturers Ltd

Chain Tilter is used to tilt/rotate the product by 90 degree.

This application is used normally in automobile
industry to handle heavy weight products

Material Lifter

Client - For Fresenuis-kabi, Ranjangaon

- This material lifter is used in various industries for lifting the material from one platform to another platform.
- It also reduces the human efforts in lifting the heavy material.
- Lift has made in SS304.
- This lift can carry weight up to 500 kg and total height of the lift from ground is around 6m.
- Equipment Type Vertical Lifter

- MOCSS304
- Drive Geared Motor
- Lifter Size: 6000 x 1410 x 1000mm

Control Panels

Thyristor Panels

Thyristor Control panels are used to control power or voltage supplied to a load.

Typical applications are generally found where power needs to be varied and ultimately converted into thermal energy.

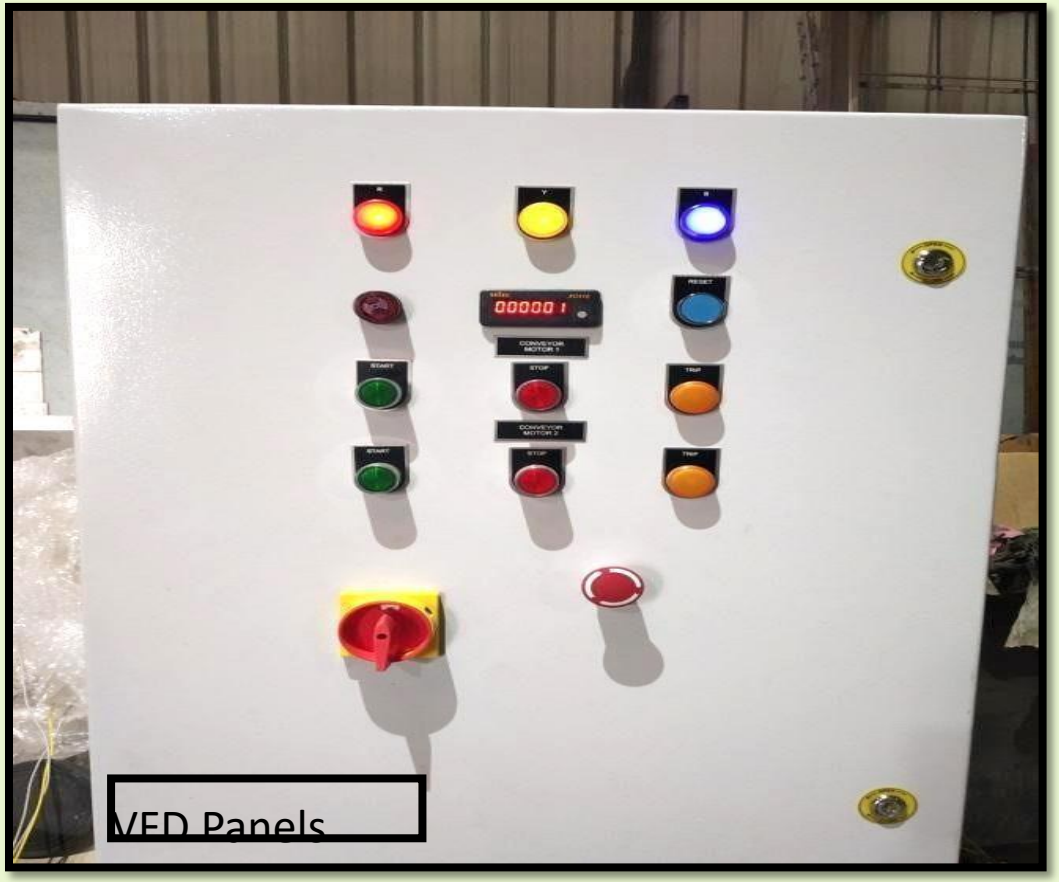

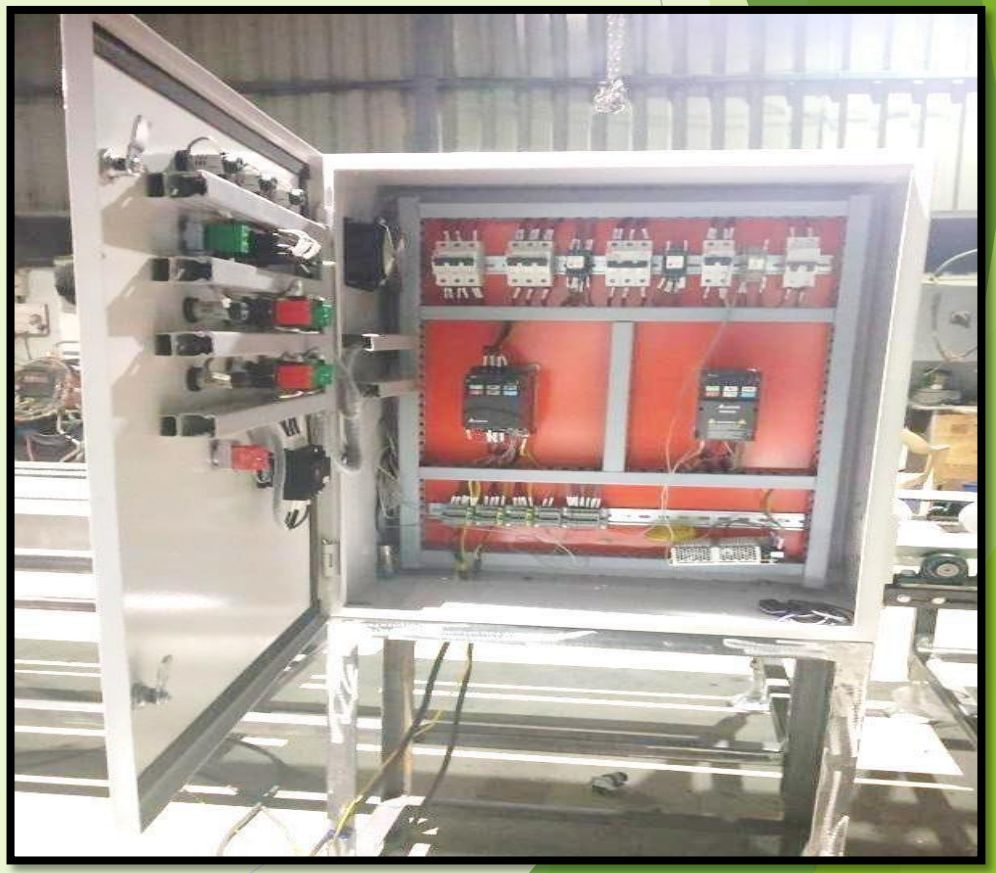

VFD Panels

When work space is dusty, dirty, wet, humid, corrosive, or hot.
In those harsh environments, you cannot just mount your VFD exposed.

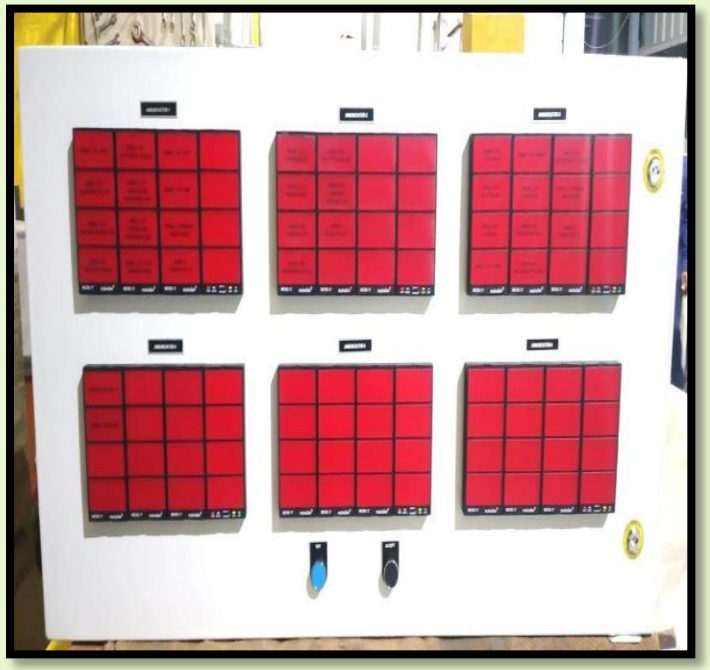

You need a VFD Control panel an enclosure that protects the VFD and other electric components.

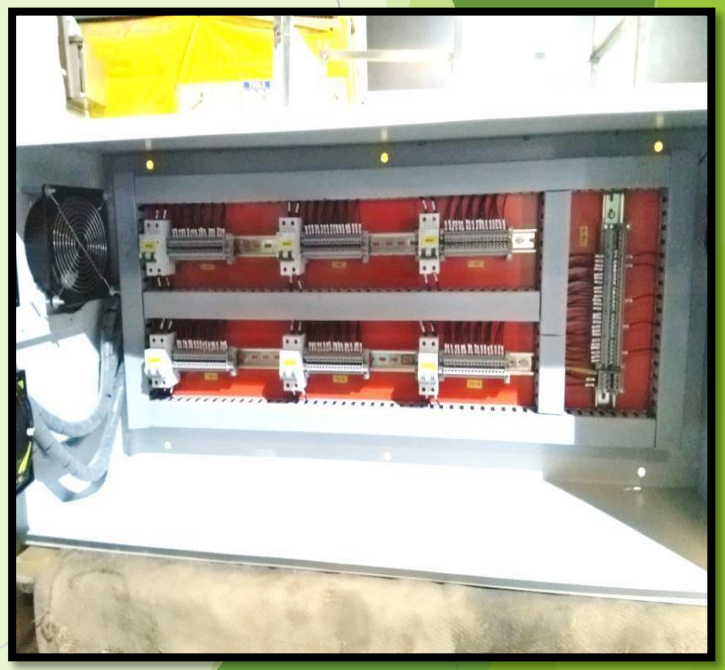

ANNUNCIATOR PANEL

An **Annunciator Panel** is a **Centralized Warning Panel (CWP)**.
Group of lights used as a central indicator of status of equipment or systems in an industrial process, building or other installation.
Usually, the annunciator panel includes a main warning lamp or audible signal to draw the attention of operating personnel to the annunciator panel for abnormal events or condition.

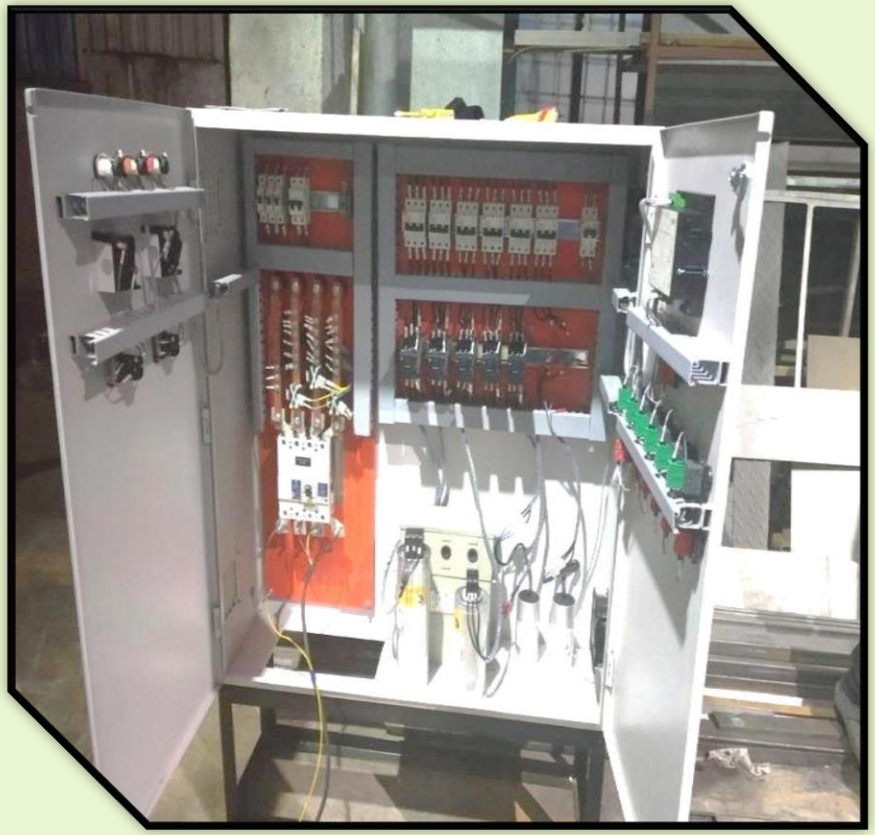

Capacitor Panels

A capacitor panel maintains the power factor of the system automatically by switching the capacitor banks as per the needs of the system.

Normally, an APFC relay along with a bank of capacitors, contactors and circuit breaker are the switchgear components used in the designing of the panel.

SS POU/WFI PANEL

POU panels are used in heating and cooling applications

Special Purpose Machines

Hot Oil Unit With Heating System

Oil heating system is mainly used to provide hot oil for other process applications.

Oil is heating in SS Tank, this SS tank has provided with ceramic wool insulation.

The system is made up of a pump that pushes the heat transfer fluid through
an insulated piping system to a heater to the processing equipment.

All processes are controlled by Control panels. Specifications are as follows

Parameters	Details
Pump Pressure	1.0 Barg
Temperature range	90 to 250 degree C
MOC of System Components (SS tank and Piping)	SS 304
Tank Capacity	150 Liters
Pump Flow rate	1.2 M3/hr
Heater Capacity	3X3 KW

Air Incineration System

In this system, Air is heated to 350 °C (Degree Centigrade) and maintained more than 6 sec. to eliminate the contamination of Bacteriophage Bacteria.

Paint Booth

Client - Cummins India Ltd., Phaltan

Paint booth is the special purpose application required to paint different Machines.

We provided this application to Cummins technology.

Main Chamber is in SS304 and other part made in MS. Blower located at rear part will be used to suck outside air.

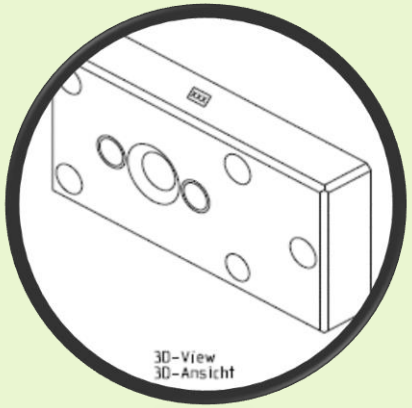

Continuous Hot water Generation Unit

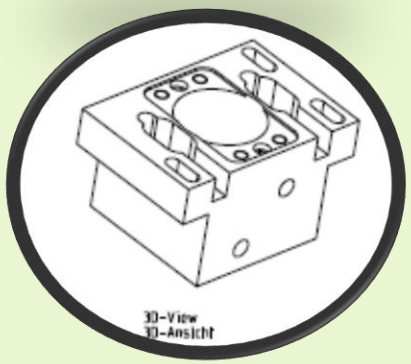

Client - Texol

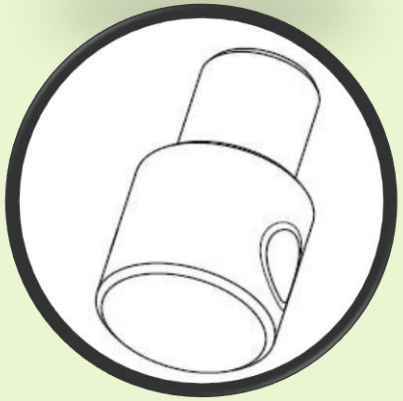

- This Unit can generate continuous hot water with flow rate of 1000LPH with 3 Bar g pressure.
- TempRange: Ambientto 95degC(working temp. 95 degC)
- Accuracy:+/ - 2.0 degC
- Temp Control: PIDController
- TempSensor:PT-100
- Separate Electronicthermostat for safety and pressure safety valve.
- Water flow monitored and controlled by flow switch & Pressure monitored by pressure gauge
- 30KWHeaters (2kw X15nos) will be used to heat the Media and provision for one no spare heater of 2 kw capacity.
- Heatercontrolvia thyristor/SSR.
